Useful Descriptors

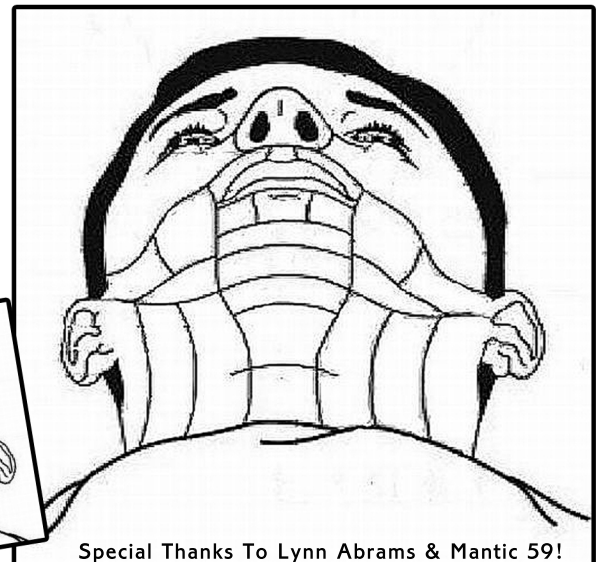

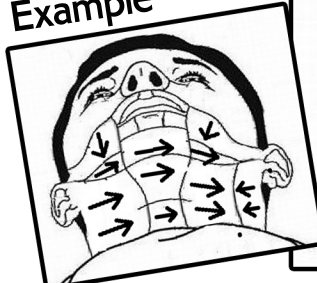

Slickness is the thin film between the blade edge and skin that prevents friction.

Cushioning is a thicker layer that stops the blade edge from digging into the skin - either directly by making the blade edge float, or indirectly by making some other part of the razor float.

Glide & Lubrication mean the same for most. It is the smoothness or lack of resistance you experience with a soap, cream or oil.

- BBS Baby Butt Smooth
- DFS Damn Fine Shave
- CCS Close Comfortable Shave
- CWS Cold Water Shave
- HWS Hot Water Shave
- DWS Distilled Water Shave
